

*NarrativePRO Software – Because a better narrative changes everything*

**EMS Healthcare Solutions**

**NarrativePRO**

- **Improve Billing Return** – The program incorporates several areas to justify the need for not only transport by ambulance, but the mobility status of the patient and the reason for hospital to hospital transfer. These areas are critical to billing success
- **Reduce/Prevent EMS Litigation** – NarrativePRO's features ensure that crew members input the right information decreasing potential risk for litigation. PWW, the leading EMS law firm in the country supports the software as an excellent tool. This is not an 'auto generated narrative'
- **Improve QA/QI Process** – the final narrative is sectioned by headers, in chronological order. This organized narrative greatly improves the QA/QI process and critical data can be found easily to ensure that protocol is being followed
- **Decrease Denials – Increase Revenue**

- NarrativePRO is changing the way narratives are written. It works as an 'add on' program to any ePCR on the market. It contains endless options for the most complete and thorough narrative possible. The best feature is the flexibility of it's options, none of which are mandatory, but completely customizable. NarrativePRO is very detailed in every way, yet basic and simple to understand. Crews can write a full page narrative or more in less than 10 minutes , but with twice the detail and information.
